

Ubuntu Desktop (server) -> Windows 10 (client)

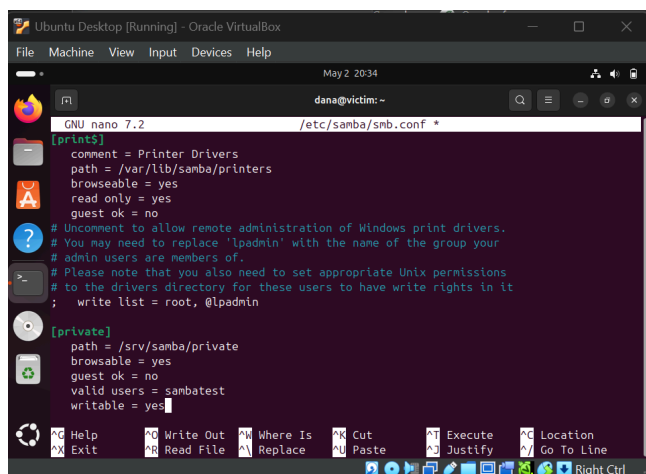

- ubuntu

```
sudo apt update
sudo apt install samba -y
sudo apt install smbclient

sudo adduser sambatest #cu parola tot sambatest
sudo smbpasswd -a sambatest #parola

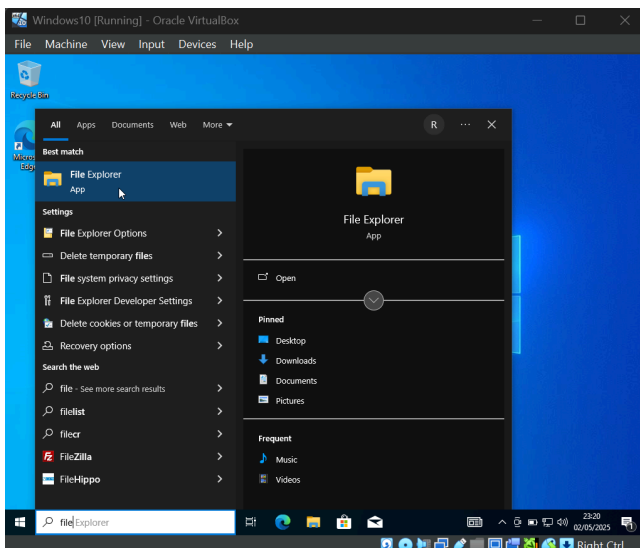

#create folder partajat
sudo mkdir -p /srv/samba/private
sudo chown sambatest:sambatest /srv/samba/private
sudo chmod 700 /srv/samba/private

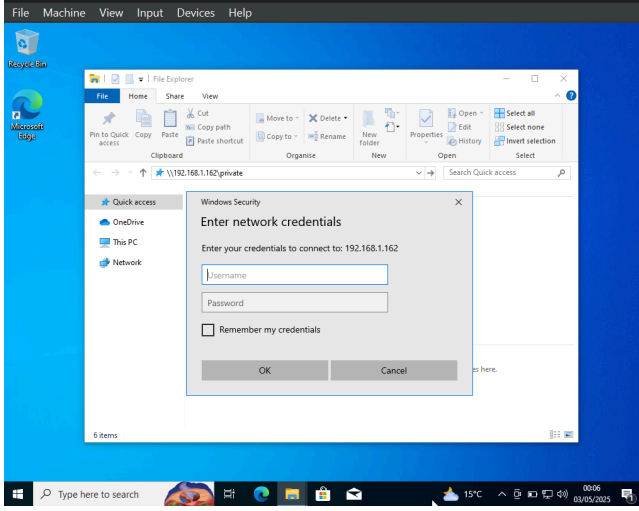

sudo nano /etc/samba/smb.conf
```

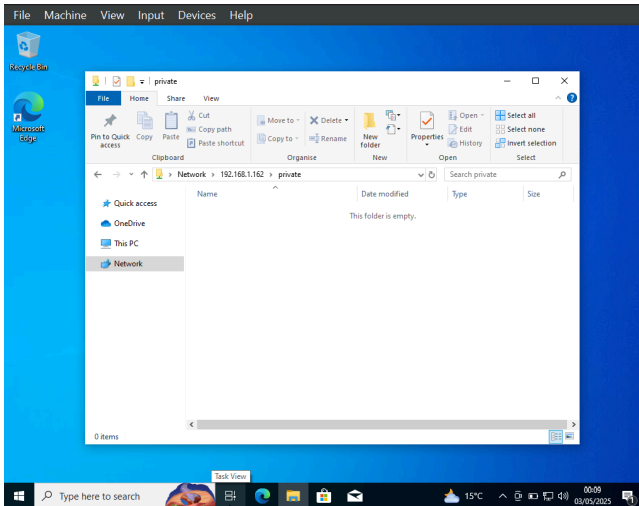

```
sudo systemctl restart smbd
sudo ufw allow Samba
```

- windows

aici introducem sambatest:parola

• test

• ubuntu

```
dana@victim:~$ sudo mkdir -p /srv/samba/private/testtt
dana@victim:~$ sudo chown sambatest:sambatest /srv/samba/private/testtt
dana@victim:~$ sudo chmod 700 /srv/samba/private/testtt
dana@victim:~$ sudo systemctl restart smbd
dana@victim:~$ s
```

• windows
